

# Mypy and implicit namespaces

Tom Rochette <tom.rochette@coreteks.org>

## 1 Problem

I use mypy but it doesn't seem to scan all my files. Why?

## 2 Solution

You might be using implicit namespaces in your code (see [PEP 420](#)). Support for implicit namespaces in mypy is rather flaky as of 2020-03-03.

One solution for the moment is to add `__init__.py` and make all your namespaces explicit.

Another solution is to replace your calls to `mypy some-path` with `mypy $(find some-path -name "*.py")`.
