

RFC

Tom Rochette <tom.rochette@coreteks.org>

August 30, 2025 — [861fb9d0](#)

- Keep all RFCs under a single location
- Uniquely identify RFCs
- Use a shared template
 - Editor: Name <email>
 - Status: Draft/Review/Approved/Abandoned/Implemented
 - Required approvers: Name <email> (why), Name <email> (why), ...
 - Approvers: Name <email> (date), Name <email> (date), ...
 - Created on: <date>
 - Updated on: <date>
 - Overview: A high level description of what you're describing in the document
 - Background/Context: Context relevant to understanding the document
 - Problem description: Describe what you are currently cannot do and want to be able to do
 - Motivation/Why: Why is it relevant to solve this problem now?
 - Drawbacks/Why not: What are the downsides of solving this problem?
 - Proposed solution: What is the best solution proposed?
 - Alternative solutions: What are the alternative solutions considered and why aren't they the proposed solution?
 - Impact and risks: What will be the impact of this change on existing systems, processes, or stakeholders?
 - Unresolved questions: What are the questions that need to be answered but don't have an answer to yet?
 - References: Documents/URLs that can be useful to consult
- If a RFC is abandoned, the reasons why should be made explicit in the document
