

Writing tests

Tom Rochette <tom.rochette@coreteks.org>

March 9, 2020 — [b01e4a4e](#)

When joining a new project without tests, here is the value you need to provide through the addition of tests:

1. the application works and doesn't crash
 2. the application works and supports a few input cases
 3. the application works and supports a variety of input cases
 4. the application works and is robust to most input cases
- Write a test that tests the common case usage of your function
 - Write tests that cover edge cases of your function
 - Write tests to cover all statements, branches, paths
